Professional Experience

Rumah123 - Senior Frontend Engineer   June 2023 - Present

Rumah123 is a leading property portal in Indonesia which is part of 99group.

- Successfully Migrated services to the Next.js App directory to lower build time from 20 minutes to around 5 minutes and increase developer experience, resulting in faster development.
- Create reusable components to be used in more than 4 services to prevent duplicate code and reduce development time.
- Implement a strategy to make expensive tasks not to block task queues to reduce Interaction to Next Paint (INP) score to be always under 200ms in ReactJS.
- Create a new page or feature to improve traffic across more than 5 repositories using GraphQL, NextJs, SCSS, tailwind, typescript, redux and strapi.

PT MEA Digital Marketing - Frontend Developer   February 2021 - June 2023

MEA is a progressive digital marketing agency in Bandung, Indonesia that develops businesses and brands.

- Coordinated comprehensive meetings with the Board of Directors and collaborated with 2 teams, including Customer Service and Marketing, to address their needs and provide solutions on the technical side, ultimately being recognized as the "Best Solutive Employee" of 2022.
- Played a key role in the engineer recruitment process by designing technical tests and conducting interviews, leading to the addition of 2 talented engineers who align with the team's goals and culture.
- Fixed Core Web Vitals score in the old stack using React class component and webpack bundler for each page to be in grade B (>80%) based on GTmetrix Grade.
- Managed and coached 2 junior front-end developers and 1 intern by providing guidance to solve problems and reviewing pull request code.

PT Navcore Nextology - Software Developer   February 2019 - January 2021

Navcore is a Telecommunication and Information Technology solutions company.

- Participated in meetings with seniors about the company's framework called Nexigo and spread the knowledge among peers.
- Migrated travel web app from Go and jQuery to the company platform, breaking down tasks by page and API for delegation to colleagues, enhancing team collaboration.
- Explored technologies to meet the company's needs such as building a VS Code extension, and implementing BDD testing using pytest in Python.

Education

Institut Teknologi Nasional - Bachelor of Science in Industrial Engineering   July 2013 - September 2017
- **GPA: 3.66/4.00**

Makers Institute - Full Stack Development Bootcamp   August 2018 - January 2019

Pacmann Academy - AI Engineering   September 2023 - Present

Projects

Makers Institute's Instructor 2019

As an instructor for a Full Stack Development Bootcamp, I was responsible for teaching key front-end technologies including HTML5, JavaScript, CSS3, and jQuery. Additionally, I supported students in the Bebras Challenge, an international initiative that promotes computational thinking among students.
